

A Radon Story

by

Alejandro Torres
Middle School Student
New York

Hello there sir. I got to tell you a story that isn't too long about the dangers of radon.
It is a cancer causing gas that can get around quite fast.
It is only found indoors, but wait I need to tell you more.
It seeps in through cracks in our homes, and every building is prone
To this invisible foe
At work, school, even your uncle Moe's
You can't smell it or taste it too
But don't worry, here is what to do
Number one, get your house tested to find out if it is infested
You can go to a hardware store and buy a testing kit to make sure
Now go home and run the test
Be patient, wait, get some rest
Send your sample to a lab, just a few more days
Don't get mad?
Wait for a letter to arrive
Hey look it's here, what a surprise
Oh no, its bad, here's what to do
Just follow step number two
Just get your radon problem fixed
It's pretty easy, it's not a myth
Just call a radon contractor
And soon he will be at your door
To install a vent system and pipe
He's done, aren't you a happy man?
And you have done step number three
You saved a life, Your family's
Now get out there and play
Mr Hero, you just saved the day
